## COSMETIC TATTOOING

### AFTER CARE INFORMATION

The aftercare of your cosmetic tattoo is very important for the final result. If for any reason you are unable to follow the preparation steps or the following after care steps, House of Beauty and Cosmetic Tattooing cannot guarantee the best results for your Brows. Please make sure you read through this after care sheet to ensure you get the best results for your brows.

#### **What to expect after your Cosmetic Tattoo appointment?**

Your eyebrows will be healing for at least six weeks. The first two weeks are the most critical healing period. Straight after your appointment your brows will be bold and dark, a bit of swelling, redness and weeping. The redness and swelling will go away after 24-48 hours. Your tattoo will eventually flake and scab and the colour will start to look a LOT lighter. Please DO NOT PANIC as this is just a result of the damaged and dead skin cells being pushed out, the colour will come back after 10-14 days.

1. In the first few hours after your treatment wipe your brows every 20 to 30 minutes.
2. Apply Medicone Gel 2 x a day on dry eyebrows for 7 days.
3. Please remember it takes 5 to 6 weeks for your brows to heal, even if they look healed do not stop your aftercare steps.

#### **Very important during the first 2 weeks:**

- Please DO NOT DO anything to cause excessive sweating, this will push the pigment out in your tattoo.
- DO NOT GET your brows wet, no swimming, facial cleansers or make up removers on the area.
- DO NOT GET your brows expose to the sun. Wear sunglasses and hats when outdoors. Once your brows are healed always apply sunscreen when exposed to the sun.
- DO NOT USE any brows products, make up can be worn but avoid the tattooed area.
- Your tattoo may become very itchy as they heal (avoid scratching).

#### **Remember:**

Cosmetic Tattooing is a 2-stage process, the adjustment session will correct shape, thickness, gaps, colour, depth, length, fullness and balance.

Depending on your skin type, lifestyle and how well you take care of your tattoo, the pigment can last anywhere from six to twenty-four months. After 6 months as the tattoo fades the colour can look different due to the tone and colour of your skin. Therefore, we recommend booking an annual colour boost to refresh the colour each year. Apply sunscreen on the area every day (sun and saltwater are your biggest concern).

Healing cream can be purchased at House of Beauty and Cosmetic Tattooing for \$20.

Please give Renata a call on 022 415 8274 if you have any concerns.

Many thanks,

House of Beauty and Cosmetic Tattooing.
